GNSS Antenna
for Reference Station

SA1100 TECHNICAL FEATURES

MINI CHOKE RING ANTENNA

SA1100 is a Mini Choke Ring Antenna capable of tracking all satellite constellations, GPS, GLONASS, GALILEO, BEIDOU, QZSS, IRNSS, SBAS as well as L-Band correction service, and is multi-frequency. This antenna has a high anti-interference function, making it perfect for operations in harsh environments. In addition, SA1100 have high gain even with low elevation signals tracking.

COMPACT AND RUGGED

The SA1100 is a compact and lightweight antenna designed to protect the interior from dust and water (IP67). This antenna has excellent performance in a small size, with a diameter of only 185 mm and a low weight of 1.9 kg. This allows easy installation compared to standard Choke Ring antennas, which are larger and heavier.

HIGH PHASE CENTER STABILITY

The SA1100 antenna adopts a unique ring structure that offers outstanding multipath suppression performance for satellite signal tracking. The stability of this antenna reaches submillimeter values, ideal for monitoring and permanent GNSS networks.
